
ABSTRACT REPORT

Innovation:

Sustainable smart technology.

Your Motivation:

Design and build more safe and operator friendly cooling system.

Describe Your Idea:**1) The Customer:**

- Process industries
- Power plant
- Data industries
- Manufacturing sector
- Textile industries

2) The Problem:

- High maintenance cost
- High damage protection cost
- Decrease efficiency of machines
- High probability of human harm
- Late reaction of control process

3) The Solution:

Build heating/cooling system for industrial application based on artificial-intelligence which gives something more safe and operator friendly outcomes.

Expected Benefits:**1) Customer Value:**

- Easy to implement
- Easy to installation
- Easy customization
- Better customer support
- Cheap system service

2) Potential Impact:

- ➔ Low maintenance cost
- ➔ Low damage protection cost
- ➔ Increase efficiency of machines
- ➔ Low probability of human harm
- ➔ Reliable and quick control process
- ➔ Low human resources
